

TASK 2 – SALES PERFORMANCE ANALYSIS

Project Title

Sales Performance Analysis

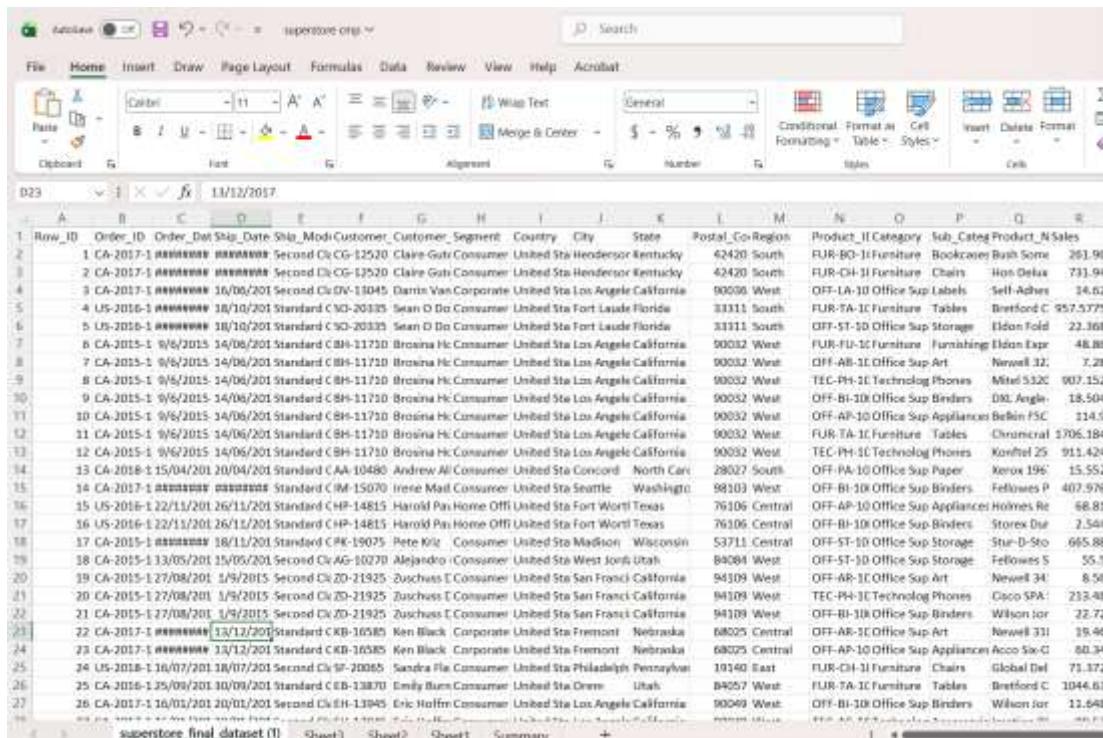

Objective

Analyze sales performance across different regions, product categories, and time periods to identify sales trends and improve business performance using Microsoft Excel.

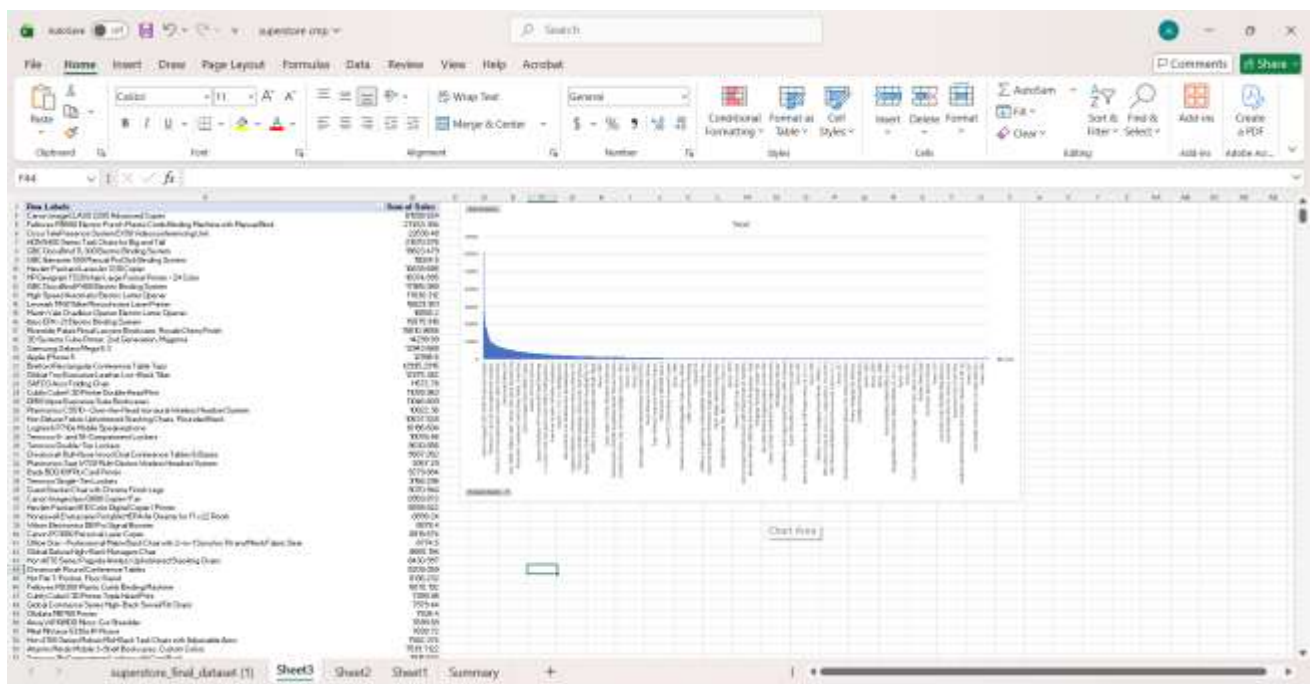

Dataset Used

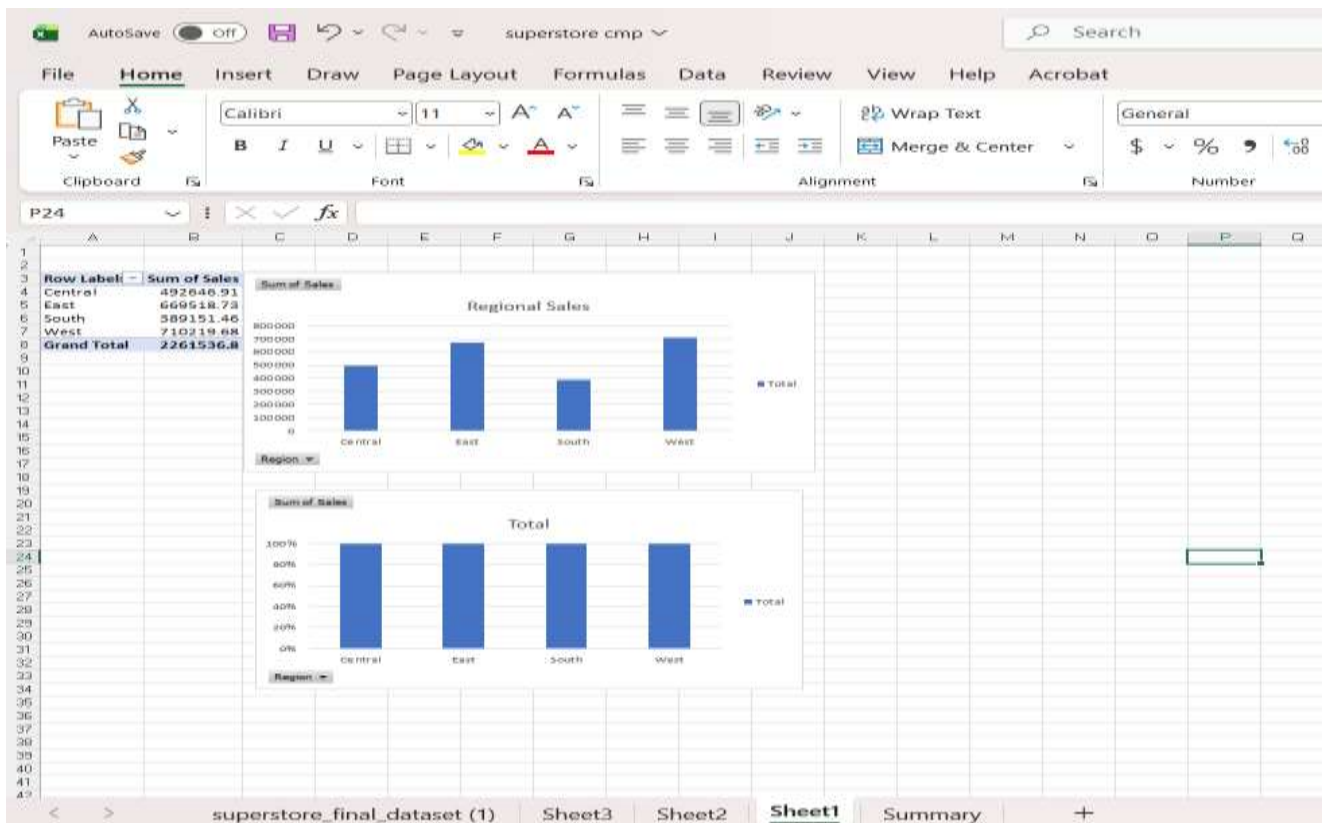

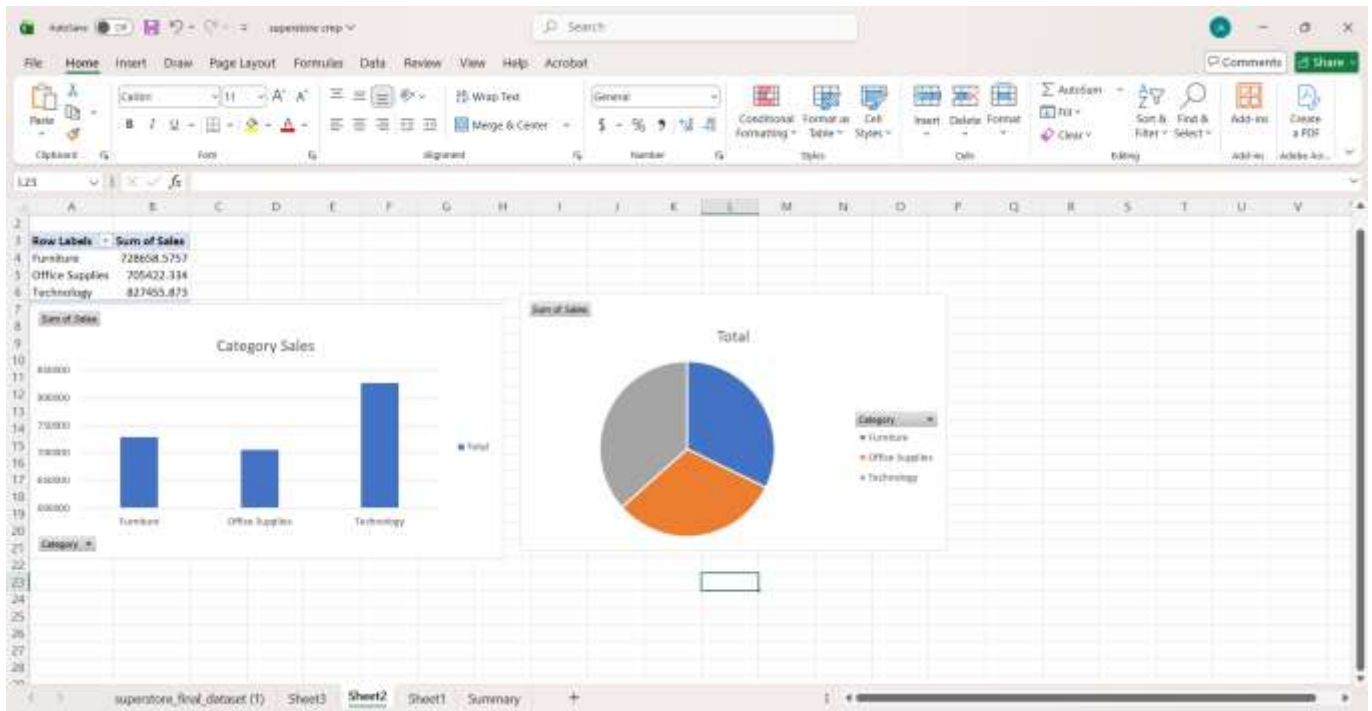

Superstore Sales Dataset (Excel)

Executive Summary

The Sales Performance Analysis project was carried out using Microsoft Excel to evaluate sales across different regions, product categories, and time periods. The dataset was cleaned and analyzed using Pivot Tables and charts to identify revenue trends, profitable products, and regional performance.

The analysis showed that sales varied across regions and product categories, with some products generating significantly higher revenue than others. Seasonal trends were observed during the analysis, indicating periods of increased customer demand. Identifying top-performing products and lower-performing categories provides valuable insights for improving business performance.

Based on these findings, Alfido Tech should focus on promoting high-performing products, improving the sales of underperforming categories through targeted marketing, strengthening sales efforts in lower-performing regions, monitoring seasonal demand for better inventory planning, and using data-driven decision-making to improve overall sales performance and profitability.

Recommendations

1. Promote top-performing products through marketing campaigns.
2. Improve sales of low-performing products using discounts and offers.
3. Focus sales efforts on lower-performing regions.
4. Maintain adequate inventory for high-demand products.
5. Monitor sales performance regularly to support better business decisions.
